

RAMAKRISHNA SONAKAM

MS Data Science (May 2026) | Ex-Amazon

NY, USA | 646-407-5642 | rsanakam@gmail.com | [LinkedIn](#) | [GitHub](#) | [Medium](#)

EDUCATION

MS, Data Science — Pace University, New York	May 2026
BE, Electronics & Telecommunications — University of Mumbai	June 2021

PROFESSIONAL EXPERIENCE

Senior Associate, Product Compliance & Operations Amazon Development Centre Hyderabad, India	Jun '23 – Aug '24
- Analyzed 1,000+ compliance audits using SQL and Excel to uncover systemic error patterns; presented findings to program managers and drove corrective action that improved data accuracy from 94% to 100% - Led cross-functional task force across ops, quality, and compliance to close a platform monitoring gap; achieved 100% operational accuracy within 3 weeks and improved senior stakeholder reporting cadence - Designed and standardized a quality-check and onboarding framework adopted across 15+ analysts and managers, reducing ramp-up time and improving team-wide output consistency	
Business Operations Specialist Amazon Development Centre Hyderabad, India	Sept '21 – May '23
- Identified and resolved reinstatement workflow bottlenecks through structured root-cause analysis, recovering ~8 analyst-hours/week and improving process throughput by 200 bps - Audited customer complaint resolution workflows across thousands of cases; surfaced compliance gaps that directly shaped platform-level seller eligibility policy enforcement	

PROJECTS

LipSyncNet Cross-Domain Generalisation — MS Capstone — <i>Python, PyTorch, CTC, Bi-LSTM, Transformer</i>	2026
- Evaluated a lip-reading model (trained on GRID) against in-the-wild MuViC speech data to measure cross-domain performance degradation — framing the research as a real-world deployment readiness study. - Conducted ablation study across three temporal backends (Bi-LSTM, Bidirectional Transformer, Identity); applied attention-based pooling and sub-word tokenisation, improving out-of-distribution accuracy.	
NYC Traffic Volume & Congestion Analysis — <i>Python, Pandas, Plotly, Scikit-learn</i>	Nov 2025
- Analyzed 1.8M NYC traffic records using Python (Pandas, Plotly) to surface borough-level and time-of-day congestion patterns; translated findings into visualizations designed for non-technical decision-makers - Built and validated a congestion-detection feature; benchmarked Decision Tree (96%) and Random Forest (95%) models and documented business trade-offs between precision and operational cost	
Customer Churn Prediction — BCG Virtual Experience — <i>Python, Pandas, Scikit-learn</i>	Nov 2024
Identified key churn drivers from customer behavior data; built Random Forest model (91% accuracy) and delivered executive summary framed around business impact, not model metrics.	
CaterPal Chatbot — Experiential Learning Lab, Pace University — <i>Flask, MongoDB, TF-IDF</i>	Mar 2025
- Scoped product requirements and mapped end-to-end user workflows for a catering platform prior to any implementation; defined feature prioritization based on user need, not technical convenience - Built NLP-based recommendation engine using TF-IDF and Flask; presented architecture trade-offs and system constraints to senior stakeholders with no technical background	

TECHNICAL SKILLS

Analytics & Strategy: Funnel analysis, cohort analysis, A/B testing, KPI definition, operational reporting, process improvement, stakeholder communication

Tech: MS-Excel, Python (Pandas, NumPy, Scikit-learn), SQL, Tableau, Plotly, Matplotlib, MongoDB, Git, Jupyter
